

# Architecting Enterprise JavaFX 8 Applications

CON2229

twitter: @AdamBien / [adam-bien.com](http://adam-bien.com)

I'm working as Java EE/SE developer,  
consultant, sometimes author, speaker and  
trainer with Java since 1995...

...and still really enjoying it!

Java Programming Language rocks!

# Retirement note for Model View Presenter Pattern

Last significant update: 11 Jul 06

Upon further study and reflection, I decided that pattern that was here under the name "Model View Presenter" needed to be split, so I have separated it into [Supervising Controller](#) and [Passive View](#). You can find a discussion of the origins of Model-View-Presenter in the context of UI architectures [here](#).

## Significant Revisions

*11 Jul 06:* Pattern split and retired

*19 Jul 04:* First public release.

*13 May 04:* First TW version.

<http://martinfowler.com/eaDev/ModelViewPresenter.html>

# Supervising Controller

- Pragmatic realization of the MVP idea
- The presenter implements as little logic as possible
- Reacts to higher level events (e.g. `save()`)

# Passive View

- Presenter is everything
- Presenter synchronizes the view with the model
- The view as dumb and anemic as possible

# Presentation Model

- Manages view or application's state
- Supports validation and data binding
- Useful for data sharing between views

MVPS is what we  
need....

...enough esoteric

# Convention Over Configuration

@Inject Dependency  
Injection?

# The Problem With WYSIWYG

IoC and (F)XML is the  
solution

# FXML

- A XML "Object Instantiator"
- Scriptable XML markup
- Any JSR-223 scripting language can be used

# Bindable Properties For Narrow Interfaces

# Code Walk Through LightView / AirPad

# Build

- Maven 3 / CI
  - (WebStart) Packaging
  - Native Packaging
  - Deployment

# Thank You!

and see you at
